Introducing Invoice Operator

Built by Twin with Qonto and OpenAI to automate the invoice collection of 500,000 SMBs

Invoice Operator automatically collects and reconciles missing invoices from your transactions directly into your

Qonto account. Now available to all Qonto customers.

Try now with Qonto   **Read more →**

The all-in-one solution to build skilled agents for large-scale operations.

State-of-the-art generalist agent

Domain-specific specialised agents

Agent secure access management

Scalable, low-latency browser infrastructure

A new para for automation

Read our manifesto

Limitless

Twin doesn't need an API to use your applications. It directly controls the interface via a web browser which means that you can now automate with a single agent any task on any application. No more limitation in what you can automate, and a single solution for all your needs.

1,829
Applications

Robust

Because Twin reasons in real-time, at every step of the process, it can adapt to any interface change, without having to change the agent. Forget about fragile RPA scripts, very long to build, and costly to maintain.
Find the contact

Intelligent

Twin Agent is powered by frontier models and optimised for our customer use cases to provide the best speed, cost and accuracy for each use case. Our last generation is powered by OpenAI CUA's model and we're collaborating with OpenAI research team to improve it on our customer use cases. In 1 year, Twin has increased speed by 6x, reduced costs by 35x, and improved accuracy by 55%.

Benchmark	CUA	Prev. SOTA	Human
OSWorld	38.1%	22.0%	72.4%
WebArena	58.1%	36.2%	78.2%
WebVoyager	87.0%	56.0%	-

Benchmark	Twin A1	Twin A2	Twin A3
Latency/step	35s	19s	6s
Cost/step	$1.10	$0.15	$0.03
Accuracy	54%	68%	84.0%
